## EXPERIENCE

### Software Developer at IBM

Jul 2016 - present

- Shipped an internal facing website for The Weather Company API. Implemented line chart, interactive map and responsive design using IBM's style library.

- Involved in designing and developing Bluemix Finance Hub a platform that allows users to deploy an app using IBM Finance services.

- Coded single page data visualization charts for SXSW 2017 using design mockups and data from MongoDB using D3 and ChartJS.

### Freelance Developer

Jul 2015 - present

Participated at hackathons, created websites and applications and contributed to open source.

### Graphic Designer / 2006 - 2014

Professional experience available upon request.

## PROJECTS

### finda car

[findacar.firebaseio.com](http://findacar.firebaseio.com)

A single page web app built in React that lets a user search a rental car by date, time and location. The app displays the available cars using Hotwire API.

### eventFindr

[chrome.google.com/webstore/detail/eventfindr](http://chrome.google.com/webstore/detail/eventfindr)

Built a Chrome extension using Eventbrite API to return events in a based on location input. The application displays events happening during the same week or the next weekend.

### giglandia

[giglandia.herokuapp.com](http://giglandia.herokuapp.com)

Lets a user find a band to see their tour schedule. The user can sign up or sign in and favorite as many bands as they like. Built in Ruby, Sinatra, jQuerymobile, Songkick API and Echonest API.

## EDUCATION

### Dev Bootcamp

San Francisco, CA / Jul 2015
